

Be a Green Superhero with Hasbro

At Hasbro, we believe every day is a chance to do better and create a more sustainable planet. From reducing waste to saving water, we can all be the superheroes the world needs. Here are a few ideas to help get you started. Remember, we're all in this together—go team!

Hit the Lights

Take heroic steps to cut your energy use at home. Remember to always turn off your lights when leaving a room. Using energy efficient appliances can also create powerful savings for your wallet and the planet!

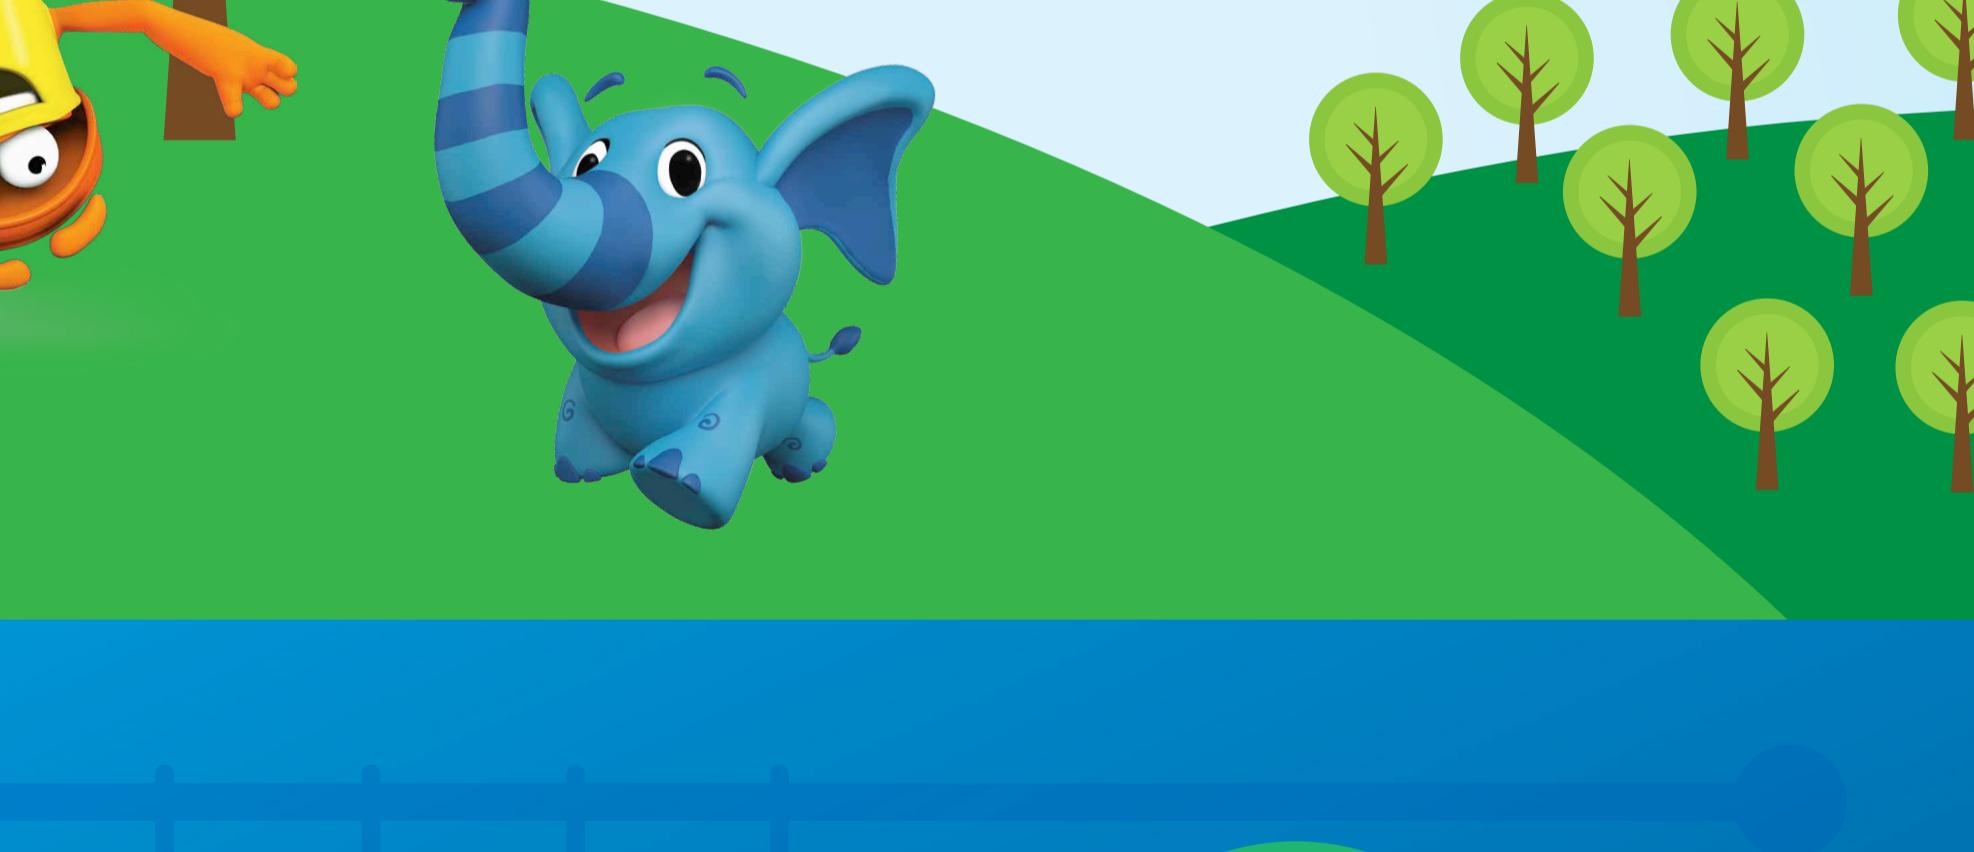

Get Crafty with Packaging

A little ingenious thinking can give packaging a new life. Can you think of creative ways to use boxes or containers at home or in your office? That small box could make a great holder for your pencils and pens! Even if you can't find a way to reuse packaging, check the recycling guidelines in your area—you may still be able to save it from the landfill.

Take a Tote

Reusable shopping bags help keep waste out of the landfill. Many stores sell reusable bags, and some even give you a discount for bringing your own bag! Plus, you can use your bag for all kinds of other trips—like picnicking in the park or carrying library books.

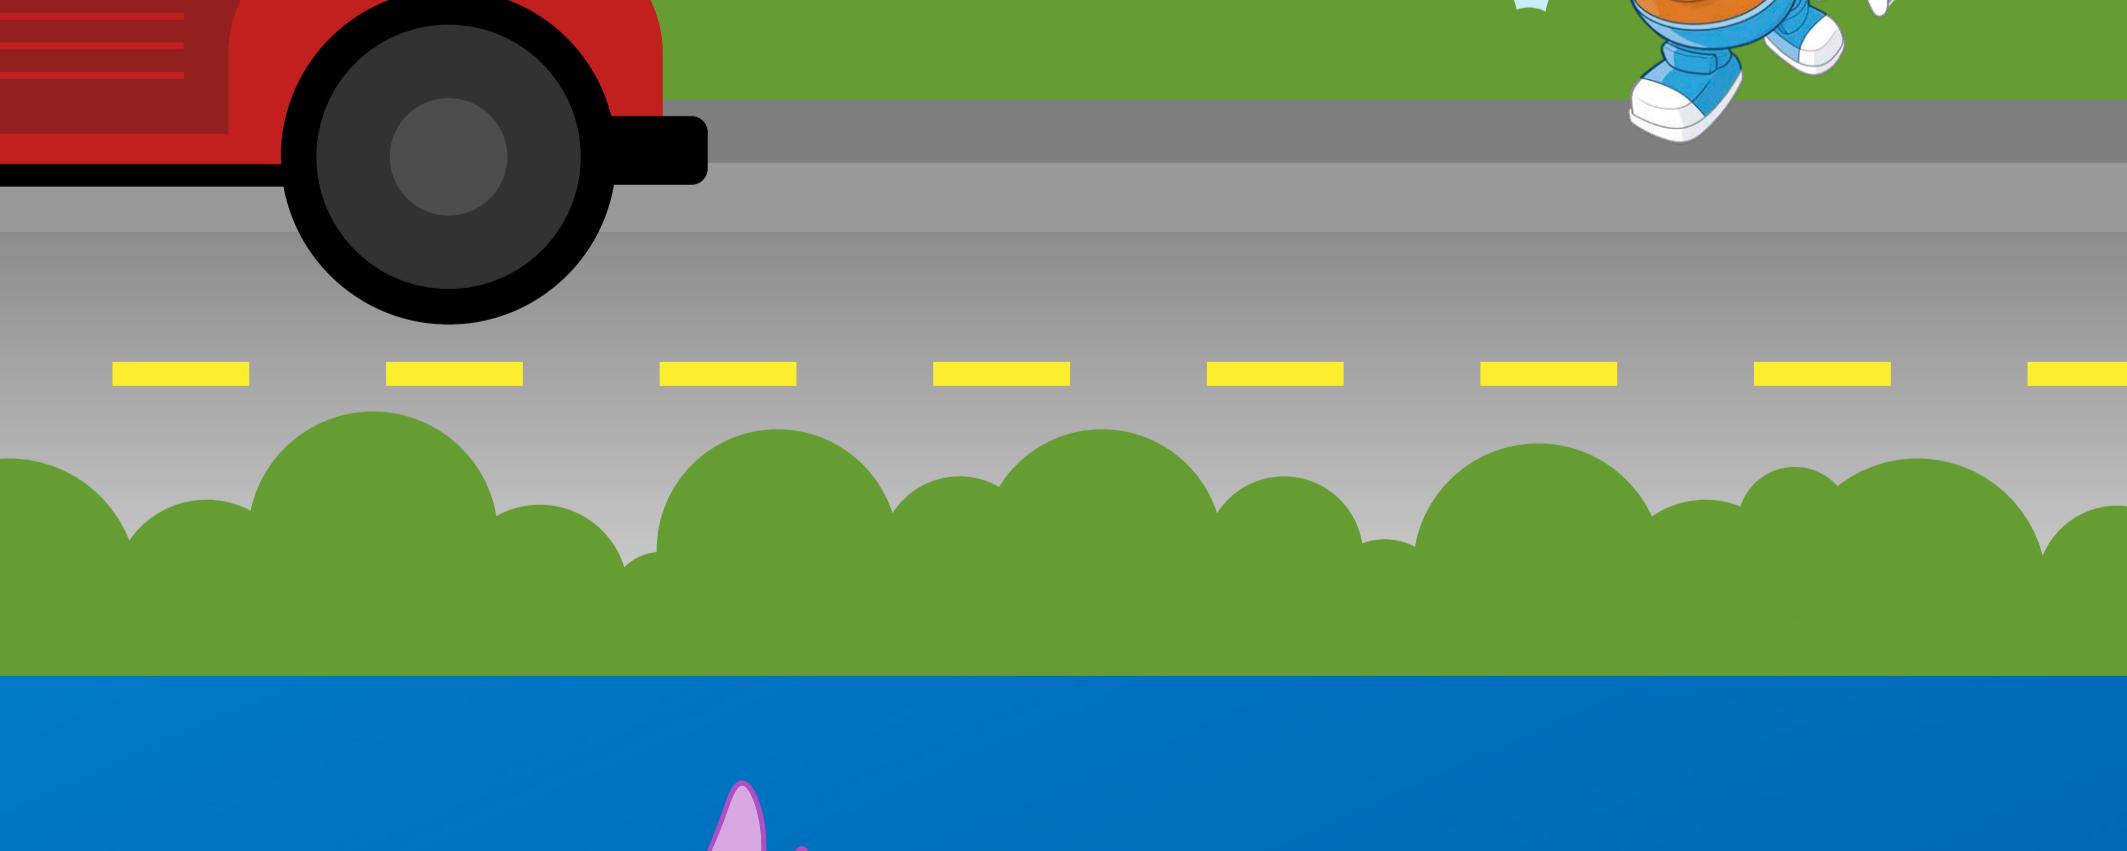

Make a Tree-mendous Difference

Trees are the lungs of the earth. They produce oxygen for all of us to breathe—including wildlife. Did you know some trees can live over a thousand years? Find a local tree-planting program in your neighborhood and help a good cause. Because every tree makes a difference!

Save in H₂Oooo So Many Ways

Water is a precious natural resource that we all depend on. Try limiting your showers to five minutes—it uses a lot less than a full bath!* And to get even more water-efficient, consider installing a low-flow shower head. With less water to heat, you'll also use less energy. Double savings!

Try a Little Pick-Me-Up

Every little bit counts. Next time you head to the beach or the park, see if you can do a little cleanup. Pick up litter and take it to the trash or recycling. Remember to pack gloves so you're always ready to go!

Give Your Car a Break

Leave your car behind: Ride a bicycle, walk or take public transportation instead for short trips. You'll spend less on fuel, reduce greenhouse gas emissions and get healthier!
