CONTENTS
Gameboard • 5 Armies (in different colors) • 18 Empire Ships • 18 Rebel Ships • 9 Hutt Ships • 2 Death Stars • 27 Empire Faction Cards • 27 Rebel Faction Cards • 5 Six-sided Dice • 4 Eight-sided Dice • 5 Imperial Base Tokens • 3 Asteroid Field Tokens

ASSEMBLY
Remove all of the pieces from the plastic bags. Discard the bags. Carefully detach the tokens and ships from the cardboard sheet. Discard the cardboard waste.

INTRODUCTION
A long time ago in a galaxy far, far away.... It is a period of civil war. Rebel starships, striking from a hidden base, have won their first victory against the evil Galactic Empire. Meanwhile, the vile gangster Jabba the Hutt, along with bounty hunters and all manner of scum and villainy, seeks to prosper financially from the ongoing galactic struggle.

HOW TO READ THESE INSTRUCTIONS
Risk Star Wars Original Trilogy Edition can be played a number of different ways. Before you read these instructions, it will greatly simplify things if you can answer these questions:

Have you played standard RISK before?

If you are familiar with the standard RISK rules and want to start playing the Star Wars Original Trilogy Edition quickly, just skip Section 1: Standard RISK and go on to the rest of the rule book. You can always refer back to it if questions come up. You may also choose to use the RISK Star Wars Original Trilogy Edition gameboard to play standard RISK, by leaving out the special elements. If you have never played any form of RISK before, we suggest you only read Section 1: Standard RISK and play that way until you are familiar with the game. Then go back and read the other sections that contain the special rules for the RISK Star Wars Original Trilogy Edition.

How many players will you be playing the first time you play? In RISK Star Wars Original Trilogy Edition, there are three factions at war: the Empire, the Rebel Alliance, and the Hutt. While these 3 factions are always in the game, they are represented differently depending on the number of players. Sometimes the Hutt's are Active (controlled by an actual player) and sometimes they are Neutral (their pieces are on the board but are not controlled by any one player and cannot attack). Also, sometimes the Rebel Alliance and the Empire are controlled by individual players (solo), and sometimes they are controlled by teams.

Use this chart to help determine which sections you can skip to get into your first game quickly.

<table>
<thead>

<td>SKIP SECTION 3: NEUTRAL HUTTS</td>
</tr>
</tbody>
</table>

THE PLASTIC PIECES
There are 3 unique sets of pieces and 5 different colors in the game. In standard RISK, each player uses a separate color to represent his armies. There are only enough pieces included for a 3 or 4 player game of standard RISK.
Each army has 2 pieces representing troops. All troops function the same, the pieces simply represent different amounts of troops. You'll use your troops to take over and control planets.

# THE REBEL ALLIANCE (YELLOW AND ORANGE)

REBEL TROOPER // REPRESENTS 1 TROOP

SNOWSPEEDER // REPRESENTS 3 TROOPS

# THE EMPIRE (WHITE AND GRAY)

STORMTROOPER // REPRESENTS 1 TROOP

AT-ST // REPRESENTS 3 TROOPS

# THE HUTTS (GREEN)

GAMORREAN GUARD // REPRESENTS 1 TROOP

RANCOR // REPRESENTS 3 TROOPS

During the game, you will have many pieces on the board, sometimes many on one planet. When this happens, use a 3-troop piece to save space.

Example: In Hoth, the Orange player has 1 Snowspeeder and 2 Rebel Troopers. Since a Snowspeeder represents 3 troops and a Rebel Trooper represents 1 troop, the Orange player has 5 troops in Hoth (3+1+1). The Gray player has 2 AT-STs and 1 Stormtrooper in Bespin. This represents 7 troops (3+3+1).

## THE DICE

You use the 6-sided dice when attacking and defending planets.

## THE FACTION CARDS

There are 3 decks of Faction cards. For standard RISK, shuffle them all together. Cards are used to gain bonus troops.

## OTHER COMPONENTS

Place the Ship tokens, Imperial Base tokens, Asteroid Field tokens, 8-sided dice, and Death Stars back in the box. You will not need them to play standard RISK.

## GETTING STARTED

First set out the gameboard so everyone can reach it. Then, shuffle the Faction cards into one deck. Now, place the 6-sided dice to the side of the gameboard.

Each player chooses a color, takes all of the pieces of that color, and counts out his starting troops. In standard RISK, it doesn't matter which colors you choose to use. Place your pieces in a pile near you. Now get out your starting troops.

In standard RISK, the number of starting troops depends on the number of players.

<table>
<thead>
<tr>
<th># OF PLAYERS</th>
<th>STARTING TROOPS</th>
</tr>
</thead>
<tbody>
<tr>
<td>3 PLAYERS</td>
<td>35 EACH</td>
</tr>
<tr>
<td>4 PLAYERS</td>
<td>30 EACH</td>
</tr>
</tbody>
</table>

These troops will be placed on the board before play begins.

## CLAIMING PLANETS

**(PLAN YOUR STRATEGY)**

Now, each army will alternate claiming one planet until all of the remaining planets are controlled. Players roll a 6-sided die. The player with the highest roll begins. Play then continues clockwise.

To claim a planet, take one of your starting troops and place it onto an empty planet. You now control this planet. The next army then places one troop onto an empty planet claiming that planet, and so on. You cannot put a troop onto a planet that has already been claimed. Eventually, all 42 planets will be claimed. Some armies will control more planets than the others. This is OK.

**IMPORTANT:** From now on, there will never be an unclaimed planet on the board. Control of a planet (the player who has troops there) may change, but a planet will never be unclaimed.

## REINFORCING PLANETS

**(PREPARE FOR WAR)**

Now that all of the planets are claimed, you will start reinforcing your planets. The more troops you have on a planet, the easier it is to attack and defend from. Reinforcing a planet is simple: just place one of your starting troops onto a planet that you control. You cannot place reinforcements onto another army’s planet.

The first army to reinforce a planet is the same army who first claimed a planet - in other words, the turn order continues as above.

After you place your reinforcement, the army to your left reinforces one planet,
then the next army to the left, and so on. Keep going around the table until all of each army's starting troops have been placed.

There is no limit to the number of troops that can be placed on a planet. You can choose to reinforce one planet with a large number of troops or you can spread your troops out across all of your planets.

**TURN ORDER**

(roll for it, maybe?)

Roll a 6-sided die to determine which army will have the first turn. The highest roll wins and play proceeds clockwise.

**YOUR TURN**

(6 easy steps)

**STEP 1: COUNT PLANETS/REGIONS**

At the start of your turn, you get additional troops to reinforce your planets. How many reinforcements you get depends on...

* The number of planets you control,
* The number of Regions you control (if any).

**COUNT YOUR PLANETS**

Count the number of planets you control.

Take the total number of planets you control and divide this number by 3 (ignore any remainders). This is the number of reinforcements you receive.

However, the number of reinforcements you receive can NEVER be fewer than 3, so even if you control only a few planets, you'll always receive at least 3 reinforcements.

Take your reinforcements from your troop pile and put them in front of you. This is the start of your "reinforcement pile."

**STEP 2: PLAY CARDS FOR TROOPS**

(Turn In Matching Sets)

This may seem a little out of place because we haven't talked about how you get cards yet (we'll talk about that more in Step 10), but it is at this point that you could turn in a set of 3 cards to muster more troops. Place the 3 turned-in cards out of play and take troops equal to this chart below (also on the board).

<table>
<thead>
<tr>
<th>PLANETS</th>
<th>REINFORCEMENTS</th>
</tr>
</thead>
<tbody>
<tr>
<td>1-11</td>
<td>3</td>
</tr>
<tr>
<td>12-14</td>
<td>4</td>
</tr>
<tr>
<td>15-17</td>
<td>5</td>
</tr>
<tr>
<td>18-20</td>
<td>6</td>
</tr>
<tr>
<td>21-23</td>
<td>7</td>
</tr>
<tr>
<td>24-26</td>
<td>8</td>
</tr>
<tr>
<td>27-29</td>
<td>9</td>
</tr>
<tr>
<td>30-32</td>
<td>10</td>
</tr>
<tr>
<td>33-35</td>
<td>11</td>
</tr>
<tr>
<td>36-38</td>
<td>12</td>
</tr>
<tr>
<td>39-41</td>
<td>13</td>
</tr>
</tbody>
</table>

**DO YOU CONTROL ANY REGIONS?**

You also get reinforcements for every Region you control. Remember that a Region is a group of planets of the same color. If you control every planet within the Region, then you control the Region.

The number of reinforcements you receive depends on which Region (or Regions) you control (if any). Each Region has a number near it that shows you how many reinforcements you receive for that Region. For example, controlling the Mid Rim Region will give you 5 additional reinforcements. Count out these reinforcements from your troop pile and add them to the reinforcement pile in front of you (the pile you started by counting your planets).

You can use the list below to help you calculate how many reinforcements you receive.

**SET**

<table>
<thead>
<tr>
<th>TROOPS GAINED</th>
</tr>
</thead>
<tbody>
<tr>
<td>3 FIGHTER CLASS CARDS</td>
</tr>
<tr>
<td>3 BOMBER CLASS CARDS</td>
</tr>
<tr>
<td>3 CAPITAL CLASS CARDS</td>
</tr>
<tr>
<td>1 FIGHTER CLASS, 1 BOMBER CLASS, 1 CAPITAL CLASS</td>
</tr>
</tbody>
</table>

Add these troops to your reinforcement pile.

In standard RISK, if you have 5 cards in your hand, you must turn in a set so that your card total is below 5 before you start your turn.

---

**GENERAL NOTES**

**OVERVIEW**

On each one of your turns, you'll receive additional troops, which you will use to reinforce your army. You may be able to play cards to get more troops. You'll probably invade one or more planets. If you're successful, you'll be able to collect one card at the end of your turn. But whether you engage in combat or not, you'll get to relocate your forces.
A FEW WORDS ABOUT COMBAT
You can choose to put all of them on one planet or spread them out across your planets. Remember: You must place ALL of your ground troop reinforcements onto planets you control.

HOW YOU BATTLE
Attacking
There must be at least 2 troops on a planet in order to attack. This is because one troop must stay behind in order to protect the planet you are invading from. This troop cannot be part of any battle.

Now choose how many troops you will send from your attacking planet into the battle. You can send 1, 2 or 3 troops. Your invasion force may be much larger than 3, but no more than 3 troops can be sent into each battle.

Defending
Next, the defender chooses how many troops will defend from the attacked planet. You can defend with either 1 or 2 troops. There may be more troops on the planet, but 2 is the maximum number of troops you can defend with during a battle. You will continue defending the attacked planet until either your last troop is defeated or the attacker calls off the invasion.

Let the battle begin...
Now roll your battle dice.
1. The attacker takes 1, 2, or 3 6-sided dice depending on the number of troops he sent into battle. The defender takes 1 or 2 6-sided dice depending on the number of troops he sent into battle.
2. The attacker rolls his dice. The defender rolls his dice.

RESOLVING THE BATTLE
Now, put your dice in order from highest to lowest. You will then compare your highest die to your opponent's highest die to see who won.

The higher die roll wins. The loser removes a troop from the gameboard and returns it to his troop pile. This troop has been defeated. IMPORTANT: In case of a tie roll, the DEFENDER wins.

After you and your opponent compare the highest dice, compare the next-highest dice.

If there is no die to compare yours to, meaning you rolled 1 or 2 more dice than your opponent, then ignore those dice rolls.

CALLING OFF AN INVASION
After any battle, you (the attacker) may choose to call off the invasion. You may choose to invade a new planet, invade a planet you attacked earlier during this step of your turn, or end the combat part of your turn.

CHANGING THE ATTACKING PLANET DURING AN INVASION
In between battles, you can change the planet from which you are attacking and continue the invasion from a different, adjacent planet. What you cannot do is battle with troops from different planets at the same time. During one battle, all of your troops must be from the same planet.

WHERE CAN I INVADE?
You can invade from any one planet where you have troops adjacent to an enemy's planet. If you need a refresher on what makes planets adjacent, refer back to page 3. Choose a planet with your army's troops on it and announce the adjacent planet you wish to invade.

STEP 4: INVADE
(Roll Dice to Determine Outcome)
Invasions are the main part of your turn. It is here that you attack the opposing armies and attempt to take planets from them. You can choose how many times you want to attack, in what order to attack, and when to call off an attack.

You can also choose not to attack at all (if so, move on to Step 5) or to attack until you have almost no troops left. You can even attack more than one planet on your turn.

A FEW WORDS ABOUT COMBAT
Here are some terms used during combat:
- The attacker is the player whose turn it currently is.
- The defender is the player being attacked.
- An invasion is when a planet is being attacked. The invasion lasts until either the planet is taken over or until the attacker calls off the invasion. You may be able to invade more than one planet on your turn.
- A battle is one roll of the dice (for each, the attacker and defender) during an invasion. An invasion may require one battle or it may require dozens of battles.

STEP 5: TROOP FORTIFICATION
(Secure Your Borders)
After you are finished with combat (and it is your choice when you are done), you get ONE fortification (“free move”) with your troops.

To fortify your position, take as many troops as you'd like from one of your planets and move them to one other planet. Remember: There MUST be at least one troop left behind on a planet— you cannot abandon a planet.

WINNING AN INVASION AND MOVING IN
You win the invasion when you defeat the last defending troop on a planet.

Take the troops used to win the battle and move them onto the planet you invaded. You may now move any additional troops from your invading planet in to join them. So even though you can only attack with 3 troops, once you've won the invasion, you can move more troops onto your new planet. However, you must do this before you declare a new invasion.

ELIMINATING ANOTHER PLAYER
You eliminate another player if you defeat his last troop on the board. This player is now out of the game.

You, as the player who eliminated him, get his cards and may place them in your hand. If your new hand is now 5 or more, you must stop immediately and turn in a set for bonus reinforcements. You place these reinforcements onto any of your planets. If you still have 5 or more cards, then turn in another set and place these reinforcements as well. Finally, when you have 4 or fewer cards, continue your turn.

*STEP 6: PLACE TROOPS
(On Any Planets You Control)*
Now it's time to place your reinforcements. After gathering your reinforcements, place ALL of your ground troop reinforcements onto planets you control. You can choose to put all of them on one planet or spread them out across your planets. Remember: You must place ALL of your ground troop reinforcements onto planets you control.
At the end of your turn, you draw a card if you took a planet from at least one opposing army. You only get one card even if you take multiple planets from multiple players.

**STEP 6: DRAW A CARD (If You Successfully Invaded a Planet)**

At the end of your turn, you draw a card if you took a planet from at least one opposing army. You only get one card even if you take multiple planets from multiple players.

**END GAME (You May Need More Troops)**

As the game nears the end, a circumstance could arise in which you do not have enough pieces to fill all of your planets on the gameboard. After making change with as many 3s as possible, you may use any eliminated or unused color pieces to represent your army.

**WINNING**

In standard RISK, you win if you are the last player in the game, meaning you control all 42 planets.

**SECTION 2: RISK® STAR WARS ORIGINAL TRILOGY 2-5 PLAYERS**

**OBJECT**

In the RISK Star Wars Original Trilogy game, there are 3 factions, each with its own victory condition:

- The **Rebel Alliance** must find and destroy the Emperor, who will be hiding at one of his Imperial Bases. He is the mastermind of the evil Galactic Empire.
- The **Empire** must eliminate all Rebel forces. Wipe them out. All of them.
- The **Hutt**s must control at least 10 resource planets. The moment their 10th resource planet has been conquered, the game is over and the Hutts have won.

**SPECIAL COMPONENTS**

There are many special components you will be using in the RISK Star Wars Original Trilogy Edition as well as some enhanced components from the standard game.

**THE FACTION CARDS**

There are 3 separate decks of Faction Cards – one for each faction in the game. They should be separated by color (Empire-red; Rebel Alliance-gray; Hutts-green) but they all function in the same way. Cards are used to gain bonus troops, build ships, and to initiate special directives.

**FORCE METER (ON THE GAMEBOARD)**

On the gameboard you will find a track labeled “Force Meter.” This is used throughout the game to keep track of whether the Force is strong with the dark side (the Empire) or the light side (the Rebellion). The Force Meter does not affect the Hutts. We will discuss this in more detail later.

**THE DEATH STARS**

Two Death Stars are included in the game. You will use one to keep track of the Force on the Force Meter and the Imperial player(s) will use the other to terrorize the galaxy.

**THE IMPERIAL SHIPS**

- TIE FIGHTER
- TIE BOMBER
- STAR DESTROYER

**THE HUTT SHIPS**

- IG-2000
- SLAVE I
- JABBA'S CRUISER

**THE REBEL SHIPS**

- X-WING FIGHTER
- Y-WING BOMBER
- REBEL CRUISER

**THE SHIPS**

Each faction also has cardboard tokens representing 3 different classes of ships: Fighter class, Bomber class, and Capital class. You cannot use ships to conquer planets. Ships are only used to assist ground troops in attacking and defending during invasions. And unlike ground troops, ship classes are not interchangeable.
**BASED DICE**
Some cards and some ships will allow you to use the 8-sided dice.

**IMPERIAL BASE TOKENS**
The tokens represent Imperial Bases controlled by the Empire. At the start of each Imperial turn, one Imperial Base token must be placed facedown on the gameboard. These tokens add bonuses to the defense of the planets they are on, and one will hide the Emperor.

**ASTEROID FIELD TOKENS**
These tokens will be placed on the gameboard when the Death Star blows up a planet. The planet's space is covered up and the asteroid field that replaces it cannot be attacked or fortified through.

**GETTING STARTED**
(Are You Feeling Good, Evil, or Indifferent?)
- Separate the Faction Cards into 3 decks, the Empire, the Rebellion, and the Hutts (according to the card backs). Shuffle each separately and place them to the side of the gameboard.
- Place one of the Death Stars (it doesn’t matter which one) on the gameboard on the Start space of the Force Meter. Give the remaining Death Star to the Imperial player. If there are 2 Imperial players, they will decide as a team how to use it. More on this later...
- Place the Imperial Base tokens face-down (Imperial Base icon up) on the table and mix them up. Then stack them facedown and place them to the side of the gameboard near an Imperial army.
- Determine how many players will be playing and decide which factions you want to control. This will determine which colors you use, where you sit around the gameboard, the turn order of the game, how many pieces to start with, and if there are any limitations when claiming planets. All of this information is located in the Setup Chart on page 13. Players should sit clockwise from player 1 to 5. Also, if a neutral army is indicated, no player will play that color, but you will need to use those pieces during game setup.
- Each player takes all of the pieces and ships of his color and counts out his starting troops as well as the neutral army’s starting troops (if necessary). Use the Setup Chart on page 13 to determine your starting troops.

**CLAIMING PLANETS**
(The Hutts and Rebels Have Limits)
If no factions are neutral, the rules for claiming planets are the same as those in standard RISK (see page 5). If the Hutts are used as a neutral faction, see Section 3: Neutral Hutts.

There are some limitations (indicated in the above chart) to the amount of starting planets allowed for the Rebels and the Hutts. For instance, in a 3-player game, after claiming his 7th planet, the Hutt player will stop claiming planets and use the rest of his pieces during the reinforcement phase. Similarly, after claiming his 15th planet, the Rebel player will stop and let the Imperial player claim the rest of the planets. Once all planets are claimed and the Death Star is placed (see page 14), the original turn order will resume and all players reinforce as usual.
PLACING THE DEATH STAR—
**EMPIRE ONLY**
(On Any Imperial Planet)

After claiming the last planet, the Imperial player must decide where to place the Death Star. Although during the game you may move the Death Star to any planet, initially it MUST be placed on a planet controlled by the Empire.

Keep in mind when placing that the Death Star has 2 functions:
- **Defensively**, a planet controlled by the Empire that contains the Death Star cannot be attacked until the Death Star is moved or destroyed.
- **Offensively**, the Death Star can eventually be moved onto and destroy entire planets (all troops, ships, and the planet itself are blown to smithereens) controlled by your opponents. This requires rare special cards in the Empire Faction deck to be executed but can be very powerful. This will be explained in detail in Step 8.

Once the Death Star has been placed, the reinforcement of troops will begin, starting with the first player. Reinforcement in RISK Star Wars Original Trilogy is the same as reinforcement in standard RISK. (See Reinforcing Planets on page 5 for details.)

### GENERAL NOTES

#### OVERVIEW

On each of your turns you’ll receive additional troops to reinforce your army. You also may be able to play cards to get more troops, build ships, or initiate directives. If you successfully invade some planets, you will be able to collect one or more cards at the end of your turn and then fortify your forces.

If you are the Empire, you’ll also place Imperial Base tokens and move (and possibly fire) the Death Star.

### FACTION CAI
(They Have 3 Functions)

You will collect cards by conquering planets controlled by opposing factions. You can use any of these cards in one of three ways: to raise more troops, build ships, or initiate special directives. You will need to decide throughout the game which purpose best suits your strategy for winning the game.

If you choose to use the card for its special directive, it will be used at different times—each card indicates when its directive can be used. Read the card carefully to determine when and how to use it. You may play as many cards for directives as you want on your turn. This will come in handy when making big maneuvers such as the Rebellion attacking the Death Star or the Emperor; the Huttswtaking their 10th resource planet; or the Empire wiping out the Rebels for good.

**IMPORTANT**: Some of the special directives indicated on the cards conflict with the general rules of play. If this occurs, follow the instruction on the card.

### FORCE METER
(Light Side Helps the Rebels - Dark Side Helps the Empire)

At the start of the game, the Force Meter will always start on the red bordered start space that is located on the dark side of the Force. When the Force is stronger with the dark side, the meter indicates that the Imperial players may draw one or two extra cards at the end of their turn, in addition to any cards they earned by conquering planets from opposing factions. If the Force is balanced, there are no special rules.

The Force Meter can also make it easier or more difficult for the Rebels to destroy the Death Star by adding or subtracting 1, 2, or 3 to their dice roll when they attack it. This will be described in further detail in the section: Attacking the Death Star.

The Rebels and the Empire can move the Force Meter in these ways:
- Either faction may use a special directive on a Faction card. The cards indicate when to play them and how many spaces the Force Meter will move.
- If a Rebel player conquers a planet with an Imperial Base token on it (thereby destroying the Imperial Base), the Force Meter will move one space toward the light side.
- If the Death Star is destroyed, the Force Meter will move one space toward the light side.

### RESOURCE COUNTER
(If the Hutt’s are “Active,” They Earn Cards for Controlling Resource Planets)

Once all planets have been claimed, take an extra Hutt piece and place it on the Resource Counter on the gameboard in the space that indicates the amount of green resource planets the Huts occupy. Throughout the game, move the counter every time the Hutt player’s turn, he may take the extra cards that are indicated next to the counter.

### TURN ORDER

Use the Setup Chart on page 13 to determine turn order. This will be the order for claiming planets, reinforcing planets, and actual turns.
STEP 5: INVADE
All rules for invading are the same as standard RISK, with the following exceptions...

USING SHIPS
(They’re Die Modifiers)
Ships are great support for your troops by adding to the strength of your die rolls when attacking and defending. However, they do not represent troops in their own right. Ships must attack or defend with accompanying troops.

SHIP ADVANTAGE
Note that each ship brings with it a special advantage:

- **Fighter Class:** Fighter class ships prevent 1 or more dice from being a “1.” One fighter prevents 1 die from being a “1,” 2 fighters prevent 2 dice from being “1s,” and 3 fighters (only possible for the attacker) prevent all 3 dice from being “1s.” Any “1s” rolled are re-rolled until they are any number other than “1.”
- **Bomber Class:** Bomber class ships add 1 to a die roll, starting with your highest. One bomber would add 1 to your highest die, 2 bombers would add 1 to your 2 highest dice and 3 bombers (only possible for the attacker) would add 1 to all 3 of the die. NOTE: Bombers cannot be used to add 2 or 3 to one die.
- **Capital Class:** Capital class ships allow you to replace 6-sided dice with 8-sided dice. One Capital class ship allows you to replace 1 6-sided die with 1 8-sided die, 2 Capital class ships allow you to replace 2 6-sided dice with 2 8-sided dice, and 3 Capital class ships allow you to replace 3 6-sided dice with 3 8-sided dice (only possible for the attacker).

WINNING AN INVASION AND MOVING IN (Bring Your Ships)
If you win the invasion by destroying all of your opponent’s troops, any ships defending that planet are also destroyed. If you used ships to attack with, you must move them onto the planet you conquered along with your invading troops. You may then move any additional troops and ships onto the planet as well.

INVASING AN IMPERIAL BASE
(They Defend With 8-Siders)
At the start of each Imperial turn, a new Imperial Base will be placed on an Empire controlled planet. The Imperial Bases are strongholds for the Empire and one of them will be the hiding place of the Emperor.

If either the Rebel faction or Hutt faction decide to invade a planet with an Imperial Base token on it, the Imperial player controlling the planet may replace all defensive dice with 8-sided dice for the entire invasion.

ELIMINATING A PLAYER
(Turn in Any Cards They Had)
Any player that is eliminated from the
The Death Star can be attacked by the Hutt
on Byss. It can also be attacked by the Rebels in
Duro or by the Rebels on Bakura if they choose to
use the Hyperspace line.

Unless the total of all the dice rolled by
the attacker (including all ship, card, and
Force Meter bonuses) is 18 or higher, attacking
troops are destroyed.

If a Rebel player destroys the Death Star,
moves the Force Meter one space toward the
light side.

If the dice roll total (including ship, card,
and Force Meter bonuses) equals 18 or
higher, the Death Star is destroyed and
comes off the board. The planet on which
it was on is now open to attack.

After moving it, if you have a “Fire the
Death Star” card, you may use it to
destroy the planet it is on (provided it
is in the Region specified on the card).
Make sure to check the Region specified
on the card you have before revealing it.

If you destroy the planet, you destroy
all of the troops and ships that were on
that planet as well. Now take an Asteroid
Field token and place it on that space.
From now on, this planet is impassable.
An impassable space cannot be attacked
or fortified through. This means that an
asteroid field can possibly block a hyper-
space connection between two Regions.

After moving it, if you have a “Fire the
Death Star” card, you may use it to
destroy the planet it is on (provided it
is in the Region specified on the card).
Make sure to check the Region specified
on the card you have before revealing it.
You may attack neutral huts as your turn and the hut is not owned by any other player.

ATTACKING THE HUTS

You may attack the hut's owner and can attack twice.

Neutral Huts

The neutral huts do not have a player's token or hut.
PLACING, MOVING, AND FIRING THE DEATH STAR  
(Decide as a team)  
There will never be more than one Death Star in play even when there are 2 Imperial players. Together, you should decide where it will be placed at the start of the game.

On each Imperial players turn, he may move the Death Star. You might want to consult with your teammate before doing so, just in case he has other plans.

FACTION CARDS  
(Share a deck and show your teammate)  
Both players in the same faction will draw from the same deck of Faction cards. You may share the information on your cards with your teammate but you cannot give or trade cards with your teammate.

SECTION 5: WINNING

• The Empire wins the moment they eliminate all armies of the Rebellion.

• The Rebellion wins the moment they eliminate all Imperial armies OR when they take control of the planet with the Emperor's Imperial Base token.

• The Hutts win the moment they conquer their 10th green resource planet.
